

Pathobiology of the Aging Dog: Volume I

SHORT DESP: This book's purpose is to provide up-to-date information on age-associated changes that influence the interpretation of pathologic data derived from experimental studies using dogs.

LONG DESP: This book is part of the series "Monographs on Pathology of Laboratory Animals", and is intended for pathologists, toxicologists and gerontologists. The book goes into detail about the range of biochemical tests typically used in dogs, cause of mortality, and how much of the information presented was derived from clinicopathologic studies of canine populations.

The book's sections include: respiratory system, hemopoietic system, digestive system, endocrine system, and the reproductive system.
